INNOVATION NEVER FELT SO GOOD.™

*Is there anything you can do about lingering odors?*

## We're Glad You Asked!

It's not unusual for smells to linger in a home. New carpet, fresh paint, even the fish you cooked last Thursday can be the source of unpleasant odors. Many people use scented air fresheners and deodorizers to solve the problem, but these products simply mask smells. Also, these products may contain chemicals that contribute to poor indoor air quality (IAQ). The best way to clear the air of odors and odor-causing compounds is to install a whole-house air purification system.

### BETTER HEALTH

Air purification can be crucial to your health and to the health of each of your family members. Studies conducted by the U.S. Environmental Protection Agency indicate that the air inside the average home can be two to five times—and occasionally up to 100 times—more polluted than the air outside.

Pollutants can come from many places in and around your home. Chemicals in carpets, household cleaners, furniture and building materials all contribute to poor IAQ, as do dust mites, animal dander and mold. An air purification system can reduce and even destroy these potentially harmful pollutants.

### CLEANER AIR

The most effective solution for controlling IAQ is the PureAir™ air purification system. The PureAir system uses patented photocatalytic technology to filter, purify and freshen the air, and it combines all these capabilities into one integrated system. For best results, combine the PureAir system with an ultraviolet germicidal light, which inhibits the growth of biological contaminants like mold spores and bacteria.

### HOW MUCH ENERGY DOES AN AIR PURIFICATION DEVICE USE?

Lennox® air purification devices are designed to clear the air effectively and efficiently. For instance, the energy cost to operate a germicidal light is about the same as the cost of using a 40-watt light bulb.

### DETERMINING IF AN AIR PURIFICATION SYSTEM IS RIGHT FOR YOU

If you are wondering whether you are in need of an air purification device for your home, you might ask yourself these questions:

#### **Is anyone in your home particularly sensitive to strong odors, such as smoke?**

Air purifiers, especially the PureAir™ air purification system, have been proven to be effective at controlling unwanted odors in the air. In fact, the PureAir system cleans the air in your home better than any other single system you can buy.

#### **Do you or other members of your family have allergies or respiratory difficulties?**

Mold, mildew and other airborne contaminants can cause people with allergies or asthma additional discomfort. Through the use of air purification devices, concentrations of these pollutants can be drastically reduced.

### INSTALLATION AND MAINTENANCE

The PureAir air purification system and germicidal lights are fairly easy to install and maintain. Optimal solutions for central heating, ventilation and air-conditioning (HVAC) systems, these products install easily into your ductwork.

The PureAir system contains a pleated media filter that should be changed on a regular basis to prevent buildup of contaminants. It's also equipped with ultraviolet (UV) lights that need to be replaced annually to ensure peak performance. Filters and UV lights can be obtained through your local Lennox dealer.
